

**Examiner's Amendment**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
  
2. Authorization for this examiner's amendment was given in a telephone interview with Ms. Leslie A. Van Leeuwen, (Registration number: 42,196), on 4/29/08.
  
3. The claims have been amended as follows:
  1. A method for loading software on a plurality of processors in a heterogeneous processor environment, said method comprising:
    - executing a program on a first processor;
    - in response to executing the program, loading a runtime loader onto the first processor;
    - using the runtime loader loaded on the first processor to retrieve an executable file;
    - using the runtime loader to extract a processor identifier from the executable file, the processor identifier corresponding to the executable file;
    - determining, using the runtime loader, whether to load the executable file on a second processor based upon whether the processor identifier corresponding to the second processor;

using the runtime loader to load the executable file from the first processor onto the second processor in response to determining that the processor identifier corresponds to the second processor;

sending a plug-in to the second processor using the first processor, the plug-in corresponding to the executable file;

sending data to the second processor using the first processor, the data corresponding to the plug-in; and

processing the data with the plug-in using the second processor.

6. The method as described in claim 1 wherein the executable file is in a file format, and wherein the file format is selected from the group consisting of an ELF format, an XCOFF format, and a PECOFF format.

7. The method as described in claim 1 wherein the processor identifier is a machine type, the determining further comprising:  
extracting the machine type from the file; and

comparing the machine type to a plurality of machine types.

8. The method as described in claim 1 wherein the file is part of a combined file, and wherein the processor type corresponds to one or more section headers from a plurality of section headers.

9. The method as described in claim 1 wherein the file is part of a combined file, and wherein the combined file includes one or more processor identifiers that correspond to the first processor.

10. The method as described in claim 1 wherein the first processor is a processing unit and wherein the second processor is a synergistic processing unit.
